

Application No. 10/526,907
Amendment dated May 15, 2005
Reply to Office Action of March 9, 2006

Docket No.: HO-P03139US0

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A container, comprising:
a container body and a lid connected to it, the container body and lid being manufactured separately;
the container body having a peripheral flange adjacent to a dispensing aperture formed on an outer wall of the container body, the container body having a recess or projection in one portion; and
the lid having a connecting land extending radially outwards from its peripheral rim, with a projection or recess provided at the end of the land distal from the lid and being perpendicular to the land, which can be brought into engagement with the recess or the projection on the container body.
2. (Previously presented) The container as claimed in claim 1, wherein the recess and the projection are shaped such that the projection engages firmly in the recess.
3. (Previously presented) The container as claimed in claim 1, wherein the end of the connecting land distal from the lid is designed such that, in the assembled state, said end lies substantially flat against the outer wall of the container body.
4. (Previously presented) The container as claimed in claim 1, wherein the container body is formed substantially cylindrical and the lid substantially round.
5. (Previously presented) The container as claimed in claim 1, wherein a hinged connection is provided in the region of the connecting land of the lid.

Docket No.: HO-P03139US0

6. (Previously presented) The container as claimed in claim 1, wherein the container body and/or the lid consist substantially of plastics material.
7. (Previously presented) The container as claimed in claim 6, wherein the container body consists of a different plastics material from the lid.
8. (Previously presented) The container as claimed in claim 6, wherein the container body and/or the lid are produced by injection moulding.
